

As a member of the Amateur Radio community, a private citizen and taxpayer, I am strongly opposed to the petition put forth by SAVI. Using bad planning and unlicensed to do so, they designed this device with no consideration on the impact it could cause. Allowing this unlicensed device in the Amateur Radio Bands could have disastrous effects with other companies requesting the same type of consideration.

If this device is allowed to operate within Amateur Radio Frequencies, the amount of interference will be great. There is nothing to stop SAVI from selling thousands to UPS for their transport vehicles, in turn, allowing a moving source of interference.

It is for these reasons we cannot allow ET Docket No. 01-278 to be passed. Thank you for your time.
